

SumUp - addition calculator website

URL = <https://slick-lights-poke.loca.lt/>

This website runs via Express so I downloaded node.js. For the URL I used the localtunnel library. There is a downloadable video demo in the readme folder.

SumUp UI Overview in pictures:

- 1) Welcome page (custom photoshop design)

I wanted a design that was retro yet simple and clear.

- 2) User input validation, must not be blank and must enter numeric values. Prompt window appears when no valid input.

- 3) Result display and clear button option
Responsive element of calculator sound when entering numbers and clicking buttons.
